

PUNEET KUKRETI

DATA ANALYST · AUTOMATION · PYTHON · AI

Delhi, India | punitkukreti49@gmail.com | github.com/puneetKukreti | linkedin.com/in/puneet-kukreti

PROFESSIONAL SUMMARY

Data Analyst with direct operational background in international trade and logistics, specializing in automating repetitive business workflows, data extraction pipelines, and intelligent AI-powered solutions. Proven ability to turn complex operational data and manual workflows into reliable, scalable, and automated systems using Python, advanced Excel, and LLM-driven automation.

PROFESSIONAL EXPERIENCE

Data Analyst — Hyundai Rotem

2023 — Present

- Analyze operational datasets to provide structured business intelligence, reporting, and operational visibility.
- Develop Python-based automation pipelines to replace repetitive manual data processing and reporting workflows.
- Partner with operations teams to identify manual bottlenecks and implement automated Excel and Python solutions.

Import Executive — Global Trade & Logistics

2019 — 2023

- Managed import documentation, customs clearance procedures, and regulatory compliance across cargo shipments.
- Handled extensive reconciliation between shipping manifests, GST filings, and Tally accounting records in Excel.
- Identified ground-level documentation bottlenecks, providing the foundation for practical analytics and automation.

FEATURED PROJECTS & AUTOMATION CASE STUDIES

Bill of Entry Data Extraction Pipeline

Python, OpenPyXL, Excel

- Outcome:** Reduced a 6-month manual data-entry backlog into an automated process running in approximately 1 week.
- Engineered automated document processing in Python to parse thousands of Bill of Entry records into clean, structured Excel sheets, eliminating transcription errors.

Automated Repetitive Workflows

Python, GST, Tally, Excel

- Outcome:** Transitioned recurring manual reconciliation into self-running automated routines (Repetition → Automation).
- Automated recurring data transfer between GST filings, Tally accounting entries, and operational spreadsheets.

AI Shipment Tracking Agent

Python, LLM, Email Automation, Live Sheets

- Outcome:** Automated real-time shipment monitoring loop (Email → AI → Live Status).
- Designed an AI workflow that parses unstructured carrier emails, identifies current container milestones, and automatically updates internal tracking dashboards.

TECHNICAL SKILLS

Data Analytics & Automation: Python (Pandas, NumPy, OpenPyXL), Advanced Microsoft Excel, Data Pipelines, Workflow Automation
Artificial Intelligence: LLM Integration, LangChain, AI Agent Workflows, Prompt Engineering
Domain & Business Systems: International Trade & Logistics, Customs Documentation (Bill of Entry), Tally ERP, GST Reconciliation
Web & Deployment: HTML5, CSS3, JavaScript, Web Applications, GitHub
